In the calculation, the excavation of the slope is completed within about 35 days, which is simulated by releasing the initial stress with 500 steps (0.2 %/step, 6,000 sec/step). After the completion of cut, 30,000 steps calculation with a time interval of 6,000 sec/step is conducted to simulate the dissipation process of negative excess pore water pressure caused by the excavation of the slope.
