Theoretical And Numerical Combustion Third Edition Cerfacs

Dear colleagues, We are very happy to announce that the third edition of the book "Theoretical and numerical combustion " is now available. This new edition incorporates the evolutions in the field of numerical combustion since 2005 as well as some innovations: it is now coupled to a web site containing movie illustrations, recorded video courses, tutorials, on-line tools which make it (we hope) a very convenient tool for students and engineers interested in the simulation of reacting flows.

The major themes are numerical simulation of transsonic and supersonic combustion phenomena, the study of supersonic reacting mixing layers, and turbulent combustion. Emphasis is laid on hyperbolic models and on numerical simulations of hydrocarbon planes with a complete set of chemical reactions carried out in two-dimensional geometries as well as on complex reactive flow simulations.

Combustion - Wikipedia

A chapter on combustion acoustics is a useful one especially for those interested in studying combustion stabilities. If the reader has read a large sum of research papers (related to combustion) the material in the the book can give the reader a systematic way of looking to the field and that will help him in organizing his material and thoughts.
