Farris has the solution with the Series 2700 Balanced Design pressure relief valve. The balanced effect is achieved by isolating the upper valve chamber and eliminating any back pressure

build-up in the bonnet affecting valve set pressure. These valves are available in 1/2", 3/4" and 1" inlet sizes with a 1" outlet and two orifice areas.

Farris Engineering Pressure Relief Valves

The function of a pressure relief valve is to protect pressure vessels, piping systems, and other equipment from pressures exceeding their design pressure by more than a fixed predetermined amount. The permissible amount of overpressure is covered by various codes and is a function of the type of equipment and the conditions causing the overpressure.

Selection and Sizing of Pressure Relief Valves

The relief valves must match the receiver design working pressure. In addition, the YCR high pressure cutout setting must be set to be no higher than 90% of the receiver DWP per the ANSI safety code for mechanical refrigeration. The receiver DWP rating should be equal to the condenser. Here is the rating information for the following receivers.

PRESSURE RELIEF VALVES WITH YCR/VCB APPLICATIONS

...

Relief valve A spring-loaded pressure relief valve actuated by the static pressure upstream of the valve. The valve opens normally in proportion to the pressure increase over the opening pressure. A relief valve is used primarily with incompressible fluids (liquids).

Safety and Relief Valves, Technical data

A relief valve has a setpoint at which it begins to open. For the

valve to fully open and pass the maximum flow, pressure must build up to some level above the setpoint of the relief valve. This is known as pressure build-up over setpoint, or simply build-up.
