A mathematical model of non-equilibrium thermomechanics of magnetic fluids is given as a logical generalization of the well-known Neuringer-Rosensweig model for equilibrium magnetization. Several phenomena are explained and predicted based on the proposed model: the effect of magnetic viscosity, the compensation of viscous stress in a shear flow, the presence of transverse stress and the ...

Thermomechanics of Magnetic Fluids - Berkovsky, B ...

A theoretical study of the character and stability of thermomagnetic flow in a microgravity environment is performed. Convection is driven owing to imposed radial magnetic and temperature gradients in a cylindrical shell containing a ferrofluid. Linear, nonlinear, and computational methods are employed.

Abstract. In any discussion of fluids, which have magnetic properties, it is convenient to divide them into the following categories, (A) ferrofluids; (B) magnetorheological fluids; (C) dispersions of micron-sized particles of a non-magnetic material

containing magnetic nano-sized particles, and (D) fluids containing paramagnetic particles.
