Line in slope-intercept form - Desmos

We can use this form of a linear equation to draw the graph of that equation on the x-y coordinate plane. Slope intercept form is $y=mx+b$, where m is slope and b is the y-intercept. If you're seeing this message, it means we're having trouble loading external resources on our website.

To graph a linear equation in slope-intercept form, we can use the information given by that form. For example, $y=2x+3$ tells us that the slope of the line is 2 and the y-intercept is at $(0,3)$. This gives us one point the line goes through, and the direction we

should continue from that point to draw the entire line.
