Gnuradio As A Digital Signal Processing Environment

GNU Radio (www.gnuradio.org) is a free, graphical, software

development toolkit that provides signal processing blocks to implement software-defined radios and signal-processing systems. It can be used with external RF hardware to create software-defined radios, or without hardware in a simulation environment.

Using GNU Radio for Analog and Digital Communications

To start the GNURadio application just type the following command from the terminal: `gnuradio-companion` This opens GNU Radio Companion (GRC) : A Basic Spectrometer. The GNURadio application we need is basically a radiospectrometer. The signal picked up by the antenna and subsequently amplified and filtered by the RF components is sent to the SDR receiver which acquires it in digital format.
