An automaton is a relatively self-operating machine, or a machine or control mechanism designed to automatically follow a predetermined sequence of operations, or respond to predetermined instructions. Some automata, such as bellstrickers in mechanical clocks, are designed to give the illusion to the casual observer that they are operating under their own power. Since long ago, the term is commonly associated with automated puppets that resemble moving humans or animals, built to impress and/or t

Wind up toys. These mechanical toys are powered by using a key and a metal spring. The spring slowly untwists and passes its energy to the toy gears. Like I said, this is probably the largest category. Gravity toys. They use the gravity to provide motion. For example these are cars powered by initial hand charging; Rubber band toys. They are similar to the spring toys, but usually simpler.
