Healthcare Equipment | Disinfection & Sterilization ...

However, since 1950, there has been an increase in medical devices and instruments made of materials (e.g., plastics) that require low-temperature sterilization. Ethylene oxide gas has been used since the 1950s for heat- and moisture-sensitive medical devices. Within the past 15 years, a number of new, low-temperature sterilization systems (e.g., hydrogen peroxide gas plasma, peracetic acid immersion, ozone) have been developed and are being used to sterilize medical devices.

Sterilization | Disinfection & Sterilization Guidelines ...

Spores used to monitor a sterilization process have demonstrated resistance

to the sterilizing agent and are more resistant than the bioburden found on medical devices 179, 911, 912. *B. atrophaeus* spores (10⁶) are used to monitor ETO and dry heat, and *G. stearothermophilus* spores (10⁵) are used to monitor steam sterilization, hydrogen peroxide gas plasma, and liquid peracetic acid sterilizers.

Sterilizing Practices | Disinfection & Sterilization ...

All medical instrument sterilization processes share three common features: air removal, a steam injection and sterilization phase and steam removal and drying. The difference between gravity and vacuum steam sterilization cycles comes down to how air is removed from the load and how steam penetrates into the load.

Sterilizing Medical Equipment - Made in USA | CSS

The first step in sterilizing hospital equipment: cleaning Cleaning surely isn't a foreign term and means basically the same thing as it does in households or restaurants. This means removing all visible foreign materials - including dust and dirt - by cleaning hospital equipment by hand with soap or detergent.
