(PDF) Stability of Functional Equations in Several Variables

Functional equations are equations where the unknowns are functions, rather than a traditional variable. However, the methods used to solve functional equations can be quite different than the methods for isolating a traditional variable. Each functional equation provides some information about a function or about multiple functions.

The Taylor series of f converges uniformly to the zero function $T_f(x) = 0$, which is analytic with all coefficients equal to zero. The function f is unequal to this Taylor series, and hence non-analytic. For any order $k \in \mathbb{N}$ and radius $r > 0$ there exists $M_{k,r} > 0$ satisfying the remainder bound (*) above.

Taylor's theorem - Wikipedia

In mathematics, a functional equation is any equation in which the unknown represents a function. Often, the equation relates the value of a function (or functions) at some point with its values at other points. For instance, properties of functions can be determined by considering the types of functional equations they satisfy.
