In this approach, the semantics of data in a

database can be directly translated into the semantics of the application. In this paper, we extend this model with a lattice-based representation for the context knowledge. We believe that the lattice representation is more natural for representing the context knowledge and for cross comparison.

In finance, a lattice model is a technique applied to the valuation of derivatives, where a discrete time model is required. For equity options, a typical example would be pricing an American option, where a

decision as to option exercise is required at "all" times (any time) before and including maturity. A continuous model, on the other hand, such as Black-Scholes, would only allow for the valuation of European options, where exercise is on the option's maturity date. For interest rate ...

We developed single-cell lattice (SCL), a computational method to reconstruct 3D structures of chromosomes based on single-cell Hi-C data. We designed a loss function and a 2 D Gaussian function specifically for the characteristics of single-cell Hi-C data. A chromosome is represented as beads-

on-a-string and stored in a 3 D cubic lattice.
