The object of the 90 % compressive strength requirement for a Type-B admixture is to require a level of performance comparable to that of the reference concrete. BThe compressive and flexural strength of the concrete containing the admixture under test at any test age shall be not less than 90 % of that attained at any previous test age.

Standard Specification for Chemical Admixtures for Concrete

Admixture is a material that is used as an ingredient for the preparation of concrete, and is added to the batch immediately prior to or during mixing materials (ACI 212.R-10). The purpose of blending admixtures is to improve fresh

or hardened concrete properties or the combination thereof. Examples of admixtures include accelerating, retarding, water-reducing, air-entraining, super plasticizing admixture (normal), and super plasticizing admixture (retarding).
