New responsive smart traffic systems acquire data and update signal lengths according to traffic demands. Smart traffic control systems generally use three devices: A central control system; Smart traffic lights; Cameras and queue detectors; The cameras and queue detectors inform the control system of real-time traffic conditions on busy city

roads. Every two seconds, the control system calculates whether it is necessary to adjust traffic light activity.

Smart Traffic Systems 101: Components, Benefits, Big Data

There are three components: traffic lights, queue detectors buried in the road and/or cameras, and a central control system. The queue detectors tell the control system the state of traffic flow on all the main roads in the city. The system in turn controls the lights to maintain a free flow of traffic within the city.
