The known bacterial associates of entomopathogenic nematodes, Photorhabdus and Xenorhabdus species, are known to produce a toxic cocktail of secondary metabolites that not only are lethal to the insect hosts, but also prevent opportunistic bacteria and fungi from utilizing the nutrient-rich cadaver, sequestering the resources for themselves and their nematode partners. The bacteria always contribute to the virulence of the duo, and usually contribute the lion's share.

Entomopathogenic nematodes (EPN) are in the species of Heterorhabditis spp. (Heterorhabditidae) and Steinernema spp. (Steinernematidae) symbiotically associated with the bacteria of the genera Photorhabdus and Xenorhabdus (Enterobacteriaceae), respectively. These nematodes occur in soil habitats and have been isolated from most regions of the world (Kaya and Gaugler, 1993).

Infectivity is an important measure of virulence in insect pathogens. The proportion of entomopathogenic nematodes that invaded a host, *Galleria mellonella* (L.), was used as a measure of infectivity in 2 species of entomopathogenic nematodes: *S. teinernema carpocapsae* (Weiser) and *Heterorhabditis bacteriophora* Poinar.

Entomopathogenic nematodes are mass produced for use as biopesticides using in vivo or in vitro methods (Shapiro-Ilan and Gaugler 2002). In vivo production (culture in live insect hosts) requires a low level of technology, has low startup costs, and resulting nematode quality is generally high, yet cost efficiency is low. The approach can be considered ideal for small markets.

Entomopathogenic nematodes are a group of nematodes, causing death to insects. The term entomopathogenic has a Greek origin, with entomon, meaning insect, and pathogenic, which means causing disease. They are animals that occupy a bio control middle ground between microbial pathogens and predator/parasitoids, and are habitually grouped with pathogens, most likely because of their symbiotic relationship with bacteria. Although many other parasitic thread worms cause diseases in living organisms,
