Newton's Laws of Motion Tutorial - Physics Classroom

In the case of Newton's first law of motion: An object that is nonmoving remains at rest (unless acted upon by an unbalanced force); and a moving object will continue in its motion at a constant velocity (unless acted upon by an unbalanced force).

Newton's Laws Review - with Answers - Physics Classroom

Answer: 23.0 m/s. Upon neglecting air resistance, there are three forces acting upon the object. The up and down force balance each other and the acceleration is caused by the applied force. The net force is 22.6 N, right (equal to the only rightward force - the applied force). So the acceleration of the object can be computed using Newton's second law.

sometimes stated as Newton's Third Law of motion: for every action, there is an equal and opposite reaction. A force is a push or a pull and it always results from an interaction between two objects. These forces always come in pairs. 1. For each stated action force, identify the reaction force. Bat hits ball. Man pushes car. Bus hits bug.

F is the net force in newtons (N); m is the mass in kilograms (kg); a is the acceleration in meters per second squared (m/s ²); This equation shows, mathematically, what will happen if you change one of the variables. For example, if you double the force on an object and its mass stays constant, its acceleration will also double (Figure 1).
