Neuropeptides are small proteins produced by neurons that act on G protein-coupled receptors and are responsible for slow-onset, long-lasting modulation of synaptic transmission. Neuropeptides often coexist with each other or with other neurotransmitters in single neurons. According to their chemical nature, coexisting messengers are localized to different cell compartments: neuropeptides are packaged in large granular vesicles (LGVs), whereas low-molecular weight neurotransmitters are ...

Neuropeptide - Wikipedia

Oxytocin and vasopressin are key effectors of social behaviour (Insel, T. R. and Fernald, R. D. (2004). *Annu. Rev. Neurosci.*, 27: 697-722). Oxytocin effects in humans were recently demonstrated by a behavioural study showing selectively increased trust after hormone administration (Kosfeld, M., et al. (2005). *Nature*, 435: 673-676).

Impact of prosocial neuropeptides on human brain function.

Oxytocin potently reduced amygdala activation and decreased coupling to brainstem regions implicated in autonomic and behavioural manifestations of fear, indicating a neural mechanism for the effects of oxytocin in social cognition in humans

and providing a potential therapeutic approach to social anxiety currently being tested in social phobia and autism.
