Thus microcellular foam injection molding process has distinct characters comparing to the traditional plastics injection. 1.2 Microcellular foam injection molding process characters Due to SCF injected into the polymer melt, it is great affect the polymer melt viscosity, injection molding process cycle, part weight, mechanical properties and surface quality etc. 1.2.1 Melt viscosity

Due to the SCF dissolved in the polymer melt, the glass transition temperature of polymer melt becomes lower.

Microcellular Foam Injection Molding Process

With microcellular injection molding, the cavity filling and packing characteristics are quite different than standard injection molding with the biggest difference being that cavity pressures are significantly lower since the process is essentially a “short-shot” process, with the final filling and packing phases being provided by cell growth rather than by movement of the injection ram (Figure 14.4).
