Dr. Merkel developed a cooling tower theory for the mass (evaporation of a small portion of water) and sensible heat transfer between the air and water in a counter flow cooling tower. The theory considers the flow of mass and energy from the bulk water to an interface, and then from the interface to the

surrounding air mass.

Cooling Tower Thermal Design Manual - Sharif

A cooling tower is a device which is used to extract excess heat from the process water stream and rejects this excess heat to the atmosphere. In industry a large amount of heat is generated continuously which is required in various processes.

Cooling Tower - Types & Industrial Applications ...

Cooling towers may either use the evaporation of water to remove process heat and cool the working fluid to near the wet-bulb air temperature or, in the case of closed circuit dry cooling towers, rely solely on air to cool the working fluid

to near the dry-bulb air temperature.

Cooling tower - Wikipedia

The main function of cooling tower is to reject heat of hot water into atmosphere & cooling down the water for further reuse. There are different types of cooling tower. Evaporation of water is responsible for majority of heat rejected from water in cooling tower. Typically 75% to 80% of heat is removed from water by evaporation process.
