An infinitely dilute solution is one where there is a sufficiently large excess of water that adding any more doesn't cause any further heat to be absorbed or evolved. So, when 1 mole of sodium chloride crystals are dissolved in an excess of water, the enthalpy change of solution is found to be +3.9 kJ mol⁻¹. The

change is slightly endothermic, and so the temperature of the solution will be slightly lower than that of the original water.

The magnitude of ΔH for a reaction depends on the physical states of the reactants and the products (gas, liquid, solid, or solution), the pressure of any gases present, and the temperature at which the reaction is carried out. To avoid confusion caused by differences in reaction conditions and ensure uniformity of data, the scientific community has selected ...

The following equation can be used to calculate the standard enthalpy of reaction:

$$\Delta H^\ominus_{\text{rxn}} = \sum \Delta H^\ominus_f \{\text{products}\} - \sum \Delta H^\ominus_f \{\text{reactants}\}$$

$$\Delta H_{\text{rxn}} = \sum \Delta H_f^\ominus \{\text{products}\} - \sum \Delta H_f^\ominus \{\text{reactants}\}.$$
 The enthalpy of reaction is calculated under standard conditions (STP).

For example, the formation of lithium fluoride, $\text{Li (s)} + \frac{1}{2} \text{F}_2 \text{ (g)} \rightarrow \text{LiF (s)}$ may be considered as the sum of several steps, each with its own enthalpy (or energy, approximately): The standard enthalpy of atomization (or sublimation) of solid lithium. The first ionization energy of gaseous lithium.

Standard enthalpy of formation - Wikipedia

The heat of solution, like all enthalpy changes, is expressed in kJ/mol for a reaction taking place at standard conditions (298.15 K and 1 bar). The heat of solution can be regarded as the sum of the enthalpy changes of three intermediate steps: The value of the overall heat of solution, $\Delta H^{\circ}_{\text{sol}}$, is the sum of these individual steps.

Definition of enthalpy of solution in Chemistry.

Many experimental data are tabulated according to the type of process. For example, extensive tables exist of enthalpies of vaporization (H for converting liquids to gases), enthalpies of fusion (H for melting

solids), enthalpies of combustion (H for

combusting a substance in oxygen), and so forth.
