Saving Tarboo Creek

One Family's Quest to Heal the Land *Timber Press*

When the Freeman family decided to transform a drainage ditch into a stream that could again nurture salmon, they knew the task would be formidable but the rewards plentiful. Saving Tarboo Creek artfully blends the story of the family's efforts with profound lessons about how we can live more constructive, fulfilling, and natural lives by engaging with the land rather than exploiting it. Based on the land ethic passionately promoted by Susan Leopold Freeman's grandfather, Aldo Leopold, in his influential book A Sand County Almanac, this timely tribute to our natural environment and the urgent need to protect it is destined to be another inspiring classic.

Evolutionary Patterns and Processes *Academic Press*

Evolution is the central theme of all biology. Research in the many branches of evolutionary study continues to flourish. This book, based on a symposium of the Linnean Society, discusses the diversity in current evolutionary research. It approaches the subject ambitiously and from several angles, bringing together eminent authors from a variety of disciplines: paleontologists traditionally with a macroevolutionary bias, neontologists concentrating on microevolutionary processes, and those studying the very essence of species and those studying the very essence of evolution: the process of speciation in living organisms. *Evolutionary Patterns and Processes* will appeal to a broad spectrum of professional biologists working in such fields as paleontology, population biology, and evolutionary genetics. Biologists will enjoy chapters by Stephen J. Gould, discovering in the much earlier work of Hugo de Vries parallels with his ideas on punctuational evolution; Guy Bush, considering why there are so many small animals; Peter Sheldon, examining detailed fossil trilobite sequences for evidence of microevolutionary processes and considering models of speciation; as well as others dealing with cytological, ecological, and behavioral processes leading to the evolution of new species. The World's Banker

A Story of Failed States, Financial Crises, and the Wealth and Poverty of Nations *Penguin*

Never has the World Bank's relief work been more important than in the last nine years, when crises as huge as AIDS and the emergence of terrorist sanctuaries have threatened the prosperity of billions. This journalistic masterpiece by Washington Post columnist Sebastian Mallaby charts those controversial years at the Bank under the leadership of James Wolfensohn—the unstoppable power broker whose daring efforts to enlarge the planet's wealth in an age of globalization and terror were matched only by the force of his polarizing personality. Based on unprecedented access to its subject, this captivating tour through the messy reality of global development is that rare triumph—an emblematic story through which a gifted author has channeled the spirit of the age. This edition features a new afterword by the author that analyzes the appointment of Paul Wolfowitz as Wolfensohn's successor at the World Bank.

Lithium Effects on Granulopoiesis and Immune Function *Springer Science & Business Media*

This monograph contains papers which resulted from an international workshop on the effects of lithium on the hematopoietic and immunologic systems. The meeting was held at the John L. and Beatrice Keeshin International Biomedical Systems Planning Center of Rush University in Eagle River, Wisconsin from June 6 through June 9, 1979. The object of this conference was to bring together scientists from around the world with an interest in the effects of lithium and its potential use in human disease to bolster and stimulate the hematologic and immune systems. These topics seemed to us to be important and the time seemed right for bringing together the workers in these fields to exchange ideas and recent research results. We sought to bring together basic research scientists trying to uncover the mechanism of action of lithium in the stimulation of granulopoiesis and in its immunologic effects, together with those involved in clinical care and the use of lithium as a therapeutic tool in neoplastic and non-neoplastic disorders. This was the first use of the Keeshin Center for such a program. The sessions were conducted in a relaxed atmosphere with a good deal of give-and-take by all the participants. The editors of this book hope that it will be useful as the first volume completely devoted to these applications of lithium in these new and, as yet, incompletely developed fields.
