Simple iterative methods, such as Jacobi, Gauss-Seidel or SOR, are particularly suited for the solution of sparse systems of linear equations. Sparse linear systems are the systems of linear equations with sparse coefficient matrices, i.e., the matrices which have a large proportion of zeros.

The Coursework Is Concerned With The Iterative Met ...

In numerical linear algebra, the Jacobi method is an iterative algorithm for determining the solutions of a strictly diagonally dominant system of linear equations. Each diagonal element is solved for, and an approximate value is plugged in. The process is then iterated until it converges. This algorithm is a stripped-down version of the Jacobi transformation method of matrix diagonalization.

Stationary iterative methods Introduction. Stationary iterative methods solve a linear system with an operator approximating the original one; and based on a measurement of the error in the result (the residual), form a "correction equation" for which this process is repeated. While these methods are simple to derive, implement, and analyze, convergence is only guaranteed for a limited class of matrices.
