Empirical Formula Determination Lab Magnesium

The empirical formula of magnesium oxide, Mg_xO_y, is written as the lowest whole-number ratio between the moles of Mg used and moles of O consumed. This is found by determining the moles of Mg and O in the product; divide each value by the smaller number; and, multiply the resulting values by small whole numbers (up to five) until you get whole number values (with 0.1 of a whole number).

Lab 2 - Determination of the Empirical Formula of ...

A combustion reaction carried out in a heated crucible using a Bunsen burner can be used to determine the empirical formula of magnesium oxide. This lab demonstrates the law of conservation of mass: the total mass of products in a complete reaction equals the total mass of reactants. The combustion reaction of magnesium burning in air is expressed as $2 \text{Mg} + \text{O}_2 \rightarrow 2 \text{MgO}$. In this experiment, an analytical balance is used to determine the mass of magnesium ribbon and magnesium oxide.

EXPERIMENT #3: DETERMINATION OF EMPIRICAL FORMULA OF ...

An empirical formula of a compound is the ratio between elements in a compound. To find the empirical formula you must first find the mass of the magnesium and oxygen. For the magnesium you would subtract the mass of the crucible from the mass of the crucible and magnesium.

We have been talking about the uses of the formulas of compounds as well as how to determine the simplest (empirical) formula of a compound based on chemical analysis. The purpose of this lab is to put this knowledge to use. During this lab you will start with two separate elements and create a compound. Using the mass of the elements that you begin with and the mass of the final product, you should be able to determine the empirical formula of the compound, magnesium oxide.
