Anatomy Of An Orogen The Apennines And Adjacent ...

Abstract. The Neoproterozoic Damara orogen in Namibia records the Gondwanan assembly of the Congo-Kalahari-Rio de la Plata cratons. Sedimentological and stratigraphic analyses of the Otavi (mostly carbonate) and Mulden (siliciclastic molasse) Groups exposed along the southwestern margin of the Congo craton indicate that foreland-basin orogenesis began during middle Otavi (ca. 600–750 Ma); this time frame is earlier than that for the Nama foreland (ca. 550 Ma) on the Kalahari craton.
