2021 Water and Wastewater Rate Survey

Is your utility's rate structure meeting your revenue goals? How does your rate structure compare with other utilities in your geographic region? How do your rates compare with other similar-sized utilities? What are the current trends in utility rates? AWWA's 2021 Water and Wastewater Rate Survey will help your utility answer these critical questions and more. It provides the most comprehensive and up-to-date water and wastewater utility rate and financial data and analyses available. Data are provided for utilities providing water service and wastewater service from 42 states and the District of Columbia. The survey includes data from utilities that serve from 1,000 to 5 million customers, making this information relevant to utilities of all sizes. Survey data are shown in a series of easy-to-read tables, ideal for detailed analyses and comparisons. Data are organized by system size, so you can quickly isolate

utilities that are similar to your own. This new edition also includes a thorough discussion on continuous improvement by measuring effectiveness and efficiency of service delivery in addition to the analysis of the data from the rate survey and the interactive spreadsheets. Data Presentation: Part I: Overview of the survey methodology Part II: Measuring to Success for water and wastewater utilities Part III: Highlights of the survey, including key findings and observations Part IV: Data summary exhibits arranged by system size for comparison purposes This survey is a joint effort of American Water Works Association and Raftelis Financial Consultants, Inc.

Proceedings of the Annual Convention of the American Water Works Association

Standard Methods for the Examination of Water and Wastewater

"The signature undertaking of the Twenty-Second Edition was clarifying the QC practices necessary to perform the methods in this manual. Section in Part 1000 were rewritten, and detailed QC sections were added in Parts 2000 through 7000. These changes are a direct and necessary result of the mandate to stay abreast of regulatory requirements and a policy intended to clarify the QC steps considered to be an integral part of each test method. Additional QC steps were added to almost half of the sections."--Pref. p. iv.

Water Transmission and Distribution *American Water Works Association*

Water distribution systems are made up of pipe, valves and pumps through which

treated water is moved from the treatment plant to homes, offices, industries, and other consumers. The types of materials and equipment used by each water system are usually governed by local conditions, past practices, and economics. Consequently, drinking water professionals must be knowledgeable about common types of equipment and operating methods that are available. Completely revised and updated, Water transmission and distribution includes information on the following: distribution system design and operation and maintenance ; piping materials ; valves, pumps, and water meters ; water main installation ; backfilling, main testing, and installation safety ; fire hydrants ; water storage ; water services ; cross-connection control ; motors and engines ; instrumentation and control ; information management and public relations.--Cover page [4].

Drought Preparedness and Response

M60 *American Water Works Association* Providing a reliable supply of water requires being prepared for water shortages of varying degree and duration. What can a municipal water supplier do to mitigate water shortages caused by drought? Preparing for drought and water shortages before they occur is the best defense. This manual will help water managers facing water shortages by illustrating how to employ tried-and-true strategies and tactics of drought mitigation, as well as new tools and methods. Managing water shortages involves temporarily reducing demand and finding alternate water to temporarily increase supply. There are options available to water managers to accomplish this. The manual provides a

proven, seven-step process to anticipate and respond to water shortages through a structured planning process.

Activated Carbon

Solutions for Improving Water Quality

American Water Works Association

"Many books have been written about granular activated carbon. Some focus on the theory of performance and removal mechanisms while others focus on design features. This book focuses on solutions. It describes the challenges facing water providers to provide safe water that is acceptable to their customers, utility experiences using activated carbon, activated carbon applications, and design and procurement approaches. The appendices include detailed case studies and a life-cycle assessment demonstrating favorable sustainability considerations for activated carbon when compared to other treatment technologies. Never before has all of this information been together in one location. The what, why, and how of activated carbon are connected in this book and demonstrate why this treatment technology has maintained its status as an integral treatment technology in the quest for pure water over millennia"--

Instrumentation and Control, 3rd Ed. (M2)

American Water Works Association

This operations manual explains the basic principles of electrical power distribution, automation, and

instrumentation in water distribution, treatment, and storage systems. Chapters cover hydraulic and electrical principles, electric motor controls, measurement instruments and displays, pumps and valves, and automatic and digital controls.

Developing Rates for Small Systems

M54 American Water Works Association

The brand new manual provides step-by-step guidance to determine revenue requirements, analyze rates, develop a financial plan, and design a better rate structure -- even with limited resources and data. Written for small water systems (defined as serving a population of up to 10,000) it focuses on the unique attributes of small systems as related to financial planning and rate design, with the understanding that most data is contained in the current customer billing system, and merely needs to be massaged. With details plus a sample case study, it helps develop a rate structure that emphasizes simplicity and ease of billing, while at the same time recognizes cost recovery and equitability. Also covered are communications with the public, which is integral to a successful rate restructuring, regulatory approval, system development funding, and rate phase-in.

Residential End Uses of Water *American Water Works Association*

The American Water Works Association Research Foundation (AWWARF) and 22 municipalities, water utilities, water purveyors, water districts and water providers funded this study. Goals of this research included: Providing specific data on the end uses of water in residential settings across the continent; Assembling data on disaggregated indoor and outdoor uses; Identifying variations in water used for each fixture or appliance according to a variety of factors; and Developing predictive models forecast residential water demand. This report represents a time and place snapshot of how water is used in single-family homes in twelve North American locations. Similarities and differences among 'end users' were tabulated for each location, analyzed

and summarized. Great care was taken to create a statistically significant representative sample of customer for each of the twelve locations. However, these twelve locations are not statistically representative of all North

American locations.
