Coherent Doppler Wind Lidars In

An eye-safe all-fiber Coherent Doppler Lidar for wind sensing system has been developed and tested at the Remote Sensing Laboratory of the City College of New York, New York, NY. The system, which operates at a 20 kHz pulse

repetition rate and acquires lidar return signals at 400 MSample/s, accumulates signals that are as much as 20 dB lower than the receiver noise power by using embedded programming techniques.

Coherent Doppler Wind Lidars in a Turbulent Atmosphere. Radiophysical tools for measuring atmospheric dynamics include sodars, Doppler radars, and Doppler lidars. Among these, coherent Doppler lidars (CDLs) have been considered the best for remote measurement of wind turbulence. This is important not only for understanding the exchange processes in the boundary layer, but also in the applied aspect, such as aviation safety.

ABSTRACT Coherent Doppler lidar measurements are of increasing interest for the wind energy industry. Wind measurements are fundamental inputs for the evaluation of potential energy yield and performance of wind farms. Three-dimensional scanning Doppler lidar may provide a new basis for wind farm site selection, design and optimization.

Coherent Doppler lidar (CDL) enables measurement of wind turbulence and

wake vortices, making it a useful tool when deciding the locations of turbines in a wind farm. 1-3 The system operates by transmitting a laser beam and then detecting the radiation backscattered by atmospheric aerosol particles. We can analyze the change in frequency (Doppler shift) of the backscattered signal to obtain the line-of-sight (LOS) velocity component of the air motion, from which we then deduce the ...

Coherent Doppler lidar to investigate wind turbulence

A doppler lidar system was used in the 2008 Summer Olympics to measure wind fields during the yacht competition. Doppler lidar systems are also now beginning to be successfully applied in the renewable energy sector to acquire

wind speed, turbulence, wind veer, and wind shear data. Both pulsed and continuous wave systems are being used.

Lidar - Wikipedia

Coherent Doppler lidar is an attractive instrument for the global measurements of winds from a space-based platform (Baker et al. 1995; Huffaker et al. 1984; Huffaker and Hardesty 1996; Menzies 1986; Menzies and Hardesty 1989). The impact of Doppler lidar and other future data products can be determined using observing system simulation experiments (OSSEs).
