Lab Hints • Students may ask how much of the baking soda they should use. In keeping with the general practice of not filling a crucible more than half-full, there is no “correct” mass of baking soda to use. This avoids situations where students believe they must use 2.00 g of baking soda or else the experiment “won’t work.”

This lesson is part of a three-day lab. In the first day students design their lab, which includes solving a stoichiometry problem. On the second day they conduct the lab, and on the third day they write and critique their lab report. In this lesson students will conduct a lab that they planned in the previous lesson. In their experimental design, students used stoichiometry to predict how much carbon dioxide would be produced from a set amount of vinegar and baking soda.
