The Acura RDX is equipped with a transfer case, which is designed to get power from the transmission and give power to both your front axle as well as rear axle. Acura owners tend to overlook the transfer case fluid, and even though it's not meant to be replaced as often as the engine oil, you should replace it as often as 30,000 miles.

Here's a picture of the transfer assembly case fill bolt, looking aft from underneath the engine. The exhaust flex joint that leads to the catalytic converter is on the left. The drain bolt is in the bottom of the transfer case, hidden from view in this photo. It looks identical. The picture attached to the above post is much clearer.
