Strategic Analysis of Netflix in India. Possible Strategies and Recommendations

A Case Study GRIN Verlag

Seminar paper from the year 2020 in the subject Economics - International Economic Relations, grade: 1,3, New York University - Leonard N. Stern - School of business, language: English, abstract: The paper focuses on strategic issues of the management of Netflix in India, pointing to the following key question: How can the company adapt its business model to gain a foothold in the Indian market? Should the company conduct acquisitions to deal with the situations? Or should Netflix exit India and shift focus to other global markets instead? Netflix, a leading American online media streaming and production company, expanded successfully across the globe in the 2010s. However, in India—a very important market for Netflix due to its large population and strong demand for video streaming—Netflix seems to be struggling. Dominant competitors and specific customer requirements have made growth difficult for the firm. In this case, both Netflix and the Indian video streaming market are analyzed, with several strategic options are compared. The team of authors recommends purchasing local studios and production houses, so that Netflix can continue to pursue its verticalization strategy and meet local consumer demands. We also suggest Netflix adapt its price to appeal to more users, as Indian users are generally more price-sensitive. While it might dilute Netflix' premium brand, we believe such risk can be mitigated by adopting a more bare-bones, lower-cost subscription targeting the large number of Indian consumers who use their smartphones to access the internet.

"Look at the Bigger Picture" an Analysis of Netflix's Business Model and Strategy from CEO Reed Hastings' Long-term View

This thesis is more of a case study, aiming to explore the potential impact of Netflix' business model and strategy on the traditional television and film ecosystem. It is a forward-looking examination, derived from CEO Reed Hastings' Long-Term View for Netflix as declared through the company's Investor Relations website in February 2014. This outlook was presented the same time the company's 10-K was filed for Fiscal Year [FY] 2013 with the Securities and Exchange Commission. Reed Hastings' Long-Term View for Netflix is written like a manifesto, declaring the revolutionary power that the company holds with regards to the television and film industry, primarily as a distributor of content. Netflix's power lies within its proprietary system and application technology that offers its subscribers suggestions and recommendations on what next to watch based on their viewing preferences and history. This collection of data has allowed Netflix to make decisions on content licensing and acquisition and, within the last few years, investment in original content. The Internet TV network's platform is available to subscribers for a no-commitment low monthly fee. Content is widely accessible, from any Internet connection and across a multitude of devices, from smartphones to large-format Smart TVs. Hastings declares that "the linear TV channel model is ripe for replacement" because of new time-shifting capabilities and technological advancements, including Netflix's own, that have given audiences advanced screen proliferation, and new choices in how they consume television and film, primarily through the Internet. This case study aims to present the ways in which Netflix is challenging that linear television model and theatrical film release model alike through their business model and strategy, as outlined particularly in the company's long-term view, outlook in their financial documents to investors, and releases about future endeavors.

Netflix Recommends

Algorithms, Film Choice, and the History of Taste Univ of California Press

Algorithmic recommender systems, deployed by media companies to suggest content based on users' viewing histories, have inspired hopes for personalized, curated media but also dire warnings of filter bubbles and media homogeneity. Curiously, both proponents and detractors assume that recommender systems for choosing films and series are novel, effective, and widely used. Scrutinizing the world's most subscribed streaming service, Netflix, this book challenges that consensus. Investigating real-life users, marketing rhetoric, technical processes, business models, and historical antecedents, Mattias Frey demonstrates that these choice aids are neither as

revolutionary nor as alarming as their celebrants and critics maintain—and neither as trusted nor as widely used. Netflix Recommends brings to light the constellations of sources that real viewers use to choose films and series in the digital age and argues that although some lament AI’s hostile takeover of humanistic cultures, the thirst for filters, curators, and critics is stronger than ever.

Netflix Nations

The Geography of Digital Distribution *NYU Press*

How streaming services and internet distribution have transformed global television culture. Television, once a broadcast medium, now also travels through our telephone lines, fiber optic cables, and wireless networks. It is delivered to viewers via apps, screens large and small, and media players of all kinds. In this unfamiliar environment, new global giants of television distribution are emerging—including Netflix, the world’s largest subscription video-on-demand service. Combining media industry analysis with cultural theory, Ramon Lobato explores the political and policy tensions at the heart of the digital distribution revolution, tracing their longer history through our evolving understanding of media globalization. Netflix Nations considers the ways that subscription video-on-demand services, but most of all Netflix, have irrevocably changed the circulation of media content. It tells the story of how a global video portal interacts with national audiences, markets, and institutions, and what this means for how we understand global media in the internet age. Netflix Nations addresses a fundamental tension in the digital media landscape – the clash between the internet’s capacity for global distribution and the territorial nature of media trade, taste, and regulation. The book also explores the failures and frictions of video-on-demand as experienced by audiences. The actual experience of using video platforms is full of subtle reminders of market boundaries and exclusions: platforms are geo-blocked for out-of-region users (“this video is not available in your region”); catalogs shrink and expand from country to country; prices appear in different currencies; and subtitles and captions are not available in local languages. These conditions offer rich insight for understanding the actual geographies of digital media distribution. Contrary to popular belief, the story of Netflix is not just an American one. From Argentina to Australia, Netflix’s ascension from a Silicon Valley start-up to an international television service has transformed media consumption on a global scale. Netflix Nations will help readers make sense of a complex, ever-shifting streaming media environment.

Netflix, Inc

Rebranding and Price Increase Debacle

In 2011 Netflix was the world's largest online movie rental service. Its subscribers paid to have DVDs delivered to their homes through the U.S. mail, or to access and watch unlimited TV shows and movies streamed over the Internet to their TVs, mobile devices, or computers. The company was founded by Marc Randolph and Reed Hastings in August, 1997 in Scotts Valley, California, after they had left Pure Software. Hastings was inspired to start Netflix after being charged \$40 for an overdue video. Initially, Netflix provided movies at \$6 per rental, but moved to a monthly subscription rate in 1999, dropping the single-rental model soon after. From then on, the company built its reputation on the business model of flat fee unlimited rentals per month without any late fees, or shipping and handling fees.

The Soft Power of the Korean Wave

Parasite, BTS and Drama *Routledge*

At this fascinating historical moment, this timely collection explores the new meaning of the Korean Wave and the process of media production, representation, distribution and consumption in a global context as a distinctive and complex form of soft power. Focusing on the most recent phenomenon of Korean popular culture, this book considers the Korean Wave in the global digital age and addresses the social, cultural and political implications in their complexity within the contexts of global inequalities and uneven power structures. The collection brings together internationally renowned scholars and regional specialists to examine this historically significant, visibly growing, yet under-explored current phenomenon in the global digital age. Drawing on a wide range of perspectives from media and communications, cultural studies, sociology, history and anthropology, and including a series of case studies from Asia, the USA, Europe and the Middle East, it provides an empirically rich and theoretically stimulating tour of this area of study, going beyond the standard Euro-American view of the evolving and complex dynamics of the media today. This collection is essential reading for students and scholars interested in Korean popular culture and in film, media, fandom and cultural industries more widely.

No Rules Rules

Netflix and the Culture of Reinvention *Penguin*

The New York Times bestseller Shortlisted for the 2020 Financial Times & McKinsey Business Book of the Year Netflix cofounder Reed Hastings reveals for the first time the unorthodox culture behind one of the world's most innovative, imaginative, and successful companies There has never before been a company like Netflix. It has led nothing short of a revolution in the entertainment industries, generating billions of dollars in annual revenue while capturing the imaginations of hundreds of millions of people in over 190 countries. But to reach these great heights, Netflix, which launched in 1998 as an online DVD rental service, has had to reinvent itself over and over again. This type of

unprecedented flexibility would have been impossible without the counterintuitive and radical management principles that cofounder Reed Hastings established from the very beginning. Hastings rejected the conventional wisdom under which other companies operate and defied tradition to instead build a culture focused on freedom and responsibility, one that has allowed Netflix to adapt and innovate as the needs of its members and the world have simultaneously transformed. Hastings set new standards, valuing people over process, emphasizing innovation over efficiency, and giving employees context, not controls. At Netflix, there are no vacation or expense policies. At Netflix, adequate performance gets a generous severance, and hard work is irrelevant. At Netflix, you don't try to please your boss, you give candid feedback instead. At Netflix, employees don't need approval, and the company pays top of market. When Hastings and his team first devised these unorthodox principles, the implications were unknown and untested. But in just a short period, their methods led to unparalleled speed and boldness, as Netflix quickly became one of the most loved brands in the world. Here for the first time, Hastings and Erin Meyer, bestselling author of The Culture Map and one of the world's most influential business thinkers, dive deep into the controversial ideologies at the heart of the Netflix psyche, which have generated results that are the envy of the business world. Drawing on hundreds of interviews with current and past Netflix employees from around the globe and never-before-told stories of trial and error from Hastings's own career, No Rules Rules is the fascinating and untold account of the philosophy behind one of the world's most innovative, imaginative, and successful companies.

Netflix Leading with Data

The Emergence of Data-driven Video

By 2009 Netflix had all but trounced its traditional bricks-and-mortar competitors in the video rental industry. Since its founding in the late 1990s, the company had changed the face of the industry and threatened the existence of such entrenched giants as Blockbuster, in large part because of its easy-to-understand subscription model, policy of no late fees, and use of analytics to leverage customer data to provide a superior customer experience and grow its e-commerce media platform. Netflix's investment in data collection, IT systems, and advanced analytics such as proprietary data mining techniques and algorithms for customer and product matching played a crucial role in both its strategy and success. However, the explosive growth of the digital media market presents a serious challenge for Netflix's business going forward. How will its analytics, customer data, and customer interaction models play a role in the future of the digital media space? Will it be able to stand up to competition from more seasoned players in the digital market, such as Amazon and Apple? What position must Netflix take in order to successfully compete in this digital arena? To examine the benefits and risks of investment in analytical technology as a means for mining customer data for business insights. Students will develop a strategy position for Netflix's investment in technology and its digital media business. Students must also consider how new corporate partnerships and changes to the customer channel model will allow the company to prosper in the highly competitive digital space.

Netflix and the Re-invention of Television *Springer*

This book deals with the various ways Netflix reconceptualises television as part of the process of TV IV. As television continues to undergo a myriad of significant changes, Netflix has proven itself to be the dominant force in this development, simultaneously driving a number of these changes and challenging television's existing institutional structures. This comprehensive study explores the pre-history of Netflix, the role of binge-watching in its organisation and marketing, and Netflix's position as a transnational broadcaster. It also examines different concepts of control and the role these play in the history of ancillary technologies, from the remote control to binge-watching as Netflix's iteration of giving control to the viewers. By focusing on Netflix's relationship with the linear television schedule, its negotiations of quality and marketing, as well as the way Netflix integrates into national media systems, Netflix and the Re-invention of Television illuminates the importance of Netflix's role within the processes of TV IV.

That Will Never Work

The Birth of Netflix and the Amazing Life of an Idea *Little, Brown*

In the tradition of Phil Knight's Shoe Dog comes the incredible untold story of how Netflix went from concept to company-all revealed by co-founder and first CEO Marc Randolph. Once upon a time, brick-and-mortar video stores were king. Late fees were ubiquitous, video-streaming unheard of, and widespread DVD adoption seemed about as imminent as flying cars. Indeed, these were the widely accepted laws of the land in 1997, when Marc Randolph had an idea. It was a simple thought-leveraging the internet to rent movies-and was just one of many more and far worse proposals, like personalized baseball bats and a shampoo delivery service, that Randolph would pitch to his business partner, Reed Hastings, on their commute to work each morning. But Hastings was intrigued, and the pair-with Hastings as the primary investor and Randolph as the CEO-founded a company. Now with over 150 million subscribers, Netflix's triumph feels inevitable, but the twenty first century's most disruptive start up began with few believers and calamity at every turn. From having to pitch his own mother on being an early investor, to the motel conference room that served as a first office, to server crashes on launch day, to the now-infamous meeting when Netflix brass pitched Blockbuster to acquire them, Marc Randolph's transformational journey exemplifies how anyone with grit, gut instincts and determination can change the world-even with an idea that many think will never work. What emerges,though, isn't just the inside story of one of the world's most iconic companies. Full of counter-intuitive concepts and written in binge-worthy prose, it answers some of our most fundamental questions about taking that leap of faith in business or in life: How do you begin? How do you weather disappointment and failure? How do you deal with success? What even is success? From idea generation to team building to knowing when it's time to let go, That Will Never Work is not only the ultimate follow-your-dreams parable, but also one of the most dramatic and insightful entrepreneurial stories of our time.

Global Competitive Strategy *Cambridge University Press*

Globalization has fundamentally changed the game of business. Strategic frameworks developed for the analysis of purely domestic business necessarily fall short in the international business context. Managers and business students require alternative approaches to understand and cope with these far-reaching changes. We must learn to think globally in order to succeed. Global Competitive Strategy shows how we can do this by providing a unique set of strategic tools for international business. Such tools include the 'star analysis' that allows strategy makers to integrate geographic information with market information about the global business environment. Also introduced is the 'global value connection' that shows managers how to account for the gains from trade and the costs of trade. Aimed at MBA students taking courses in international strategy, consultants and practising managers with responsibility for strategic development, this 2007 book offers a comprehensive strategic framework for gaining competitive advantage in the global marketplace.

Red Ocean Traps (Harvard Business Review Classics) *Harvard Business Review Classi*

As established markets become less profitable, companies increasingly need to find ways to create and capture new markets. Despite much investment and commitment, most firms struggle to do this. What, exactly, is getting in their way? The authors of the best-selling book Blue Ocean Strategy have spent over a decade exploring that question. They have seen that the trouble lies in managers' mental models--ingrained assumptions and theories about the way the world works. Though these models may work perfectly well in mature markets, they undermine executives' attempts to discover uncontested new spaces with ample potential (blue oceans) and keep companies firmly anchored in existing spaces where competition is bloody (red oceans). This article describes how to break free of these red ocean traps. To do that, managers need to: (1) Focus on attracting new customers, not pleasing current customers; (2) Worry less about segmentation and more about what different segments have in common; (3) Understand that market creation is not synonymous with either technological innovation or creative destruction; and (4) Stop focusing on premium versus low-cost strategies. The Harvard Business Review Classics series offers you the opportunity to make seminal Harvard Business Review articles a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world--and will have a direct impact on you today and for

years to come.

Netflixed

The Epic Battle for America's Eyeballs Penguin

Netflix has come a long way since 1997, when two Silicon Valley entrepreneurs, Marc Randolph and Reed Hastings, decided to start an online DVD store before most people owned a DVD player. They were surprised and elated when launch-day traffic in April 1998 crashed their server and resulted in 150 sales. Today, Netflix has more than 25 million subscribers and annual revenues above \$3 billion. Yet long- term success-or even survival-is still far from guaranteed. Journalist Gina Keating recounts the absorbing, fast-paced drama of the company's turbulent rise to the top and its attempt to invent two new kinds of business. First it engaged in a grueling war against video-store behemoth Blockbuster, transforming movie rental forever. Then it jumped into an even bigger battle for online video streaming against Google, Hulu, Amazon, and the big cable companies. Netflix ushered in such innovations as DVD rental by mail, a patented online queue of upcoming rentals, and a recommendation algorithm called Cinematch that proved crucial in its struggle against bigger rivals. Yet for all its success, Netflix is still a polarizing company. Hastings is often heralded as a visionary- he was named Business Person of the Year in 2010 by Fortune-even as he has been called the nation's worst CEO. Netflix also faces disgruntled customers after price increases and other stumbles that could tarnish the brand forever. The quest to become the world's portal for premium video on demand will determine nothing less than the future of entertainment and the Internet. Drawing on extensive new interviews and her years covering Netflix as a financial and entertainment reporter, Keating makes this tale as absorbing as it is important.

Web 2.0 makes headlines, but how does it make money? This concise guide explains what's different about Web 2.0 and how those differences can improve your company's bottom line. Whether you're an executive plotting the next move, a small business owner looking to expand, or an entrepreneur planning a startup, Web 2.0: A Strategy Guide illustrates through real-life examples how businesses, large and small, are creating new opportunities on today's Web. Stuff You Should Know

An Incomplete Compendium of Mostly Interesting Things Flatiron Books

From the duo behind the massively successful and award-winning podcast Stuff You Should Know comes an unexpected look at things you thought you knew. Josh Clark and Chuck Bryant started the podcast Stuff You Should Know back in 2008 because they were curious—curious about the world around them, curious about what they might have missed in their formal educations, and curious to dig deeper on stuff they thought they understood. As it turns out, they aren't the only curious ones. They've since amassed a rabid fan base, making Stuff You Should Know one of the most popular podcasts in the world. Armed with their inquisitive natures and a passion for sharing, they uncover the weird, fascinating, delightful, or unexpected elements of a wide variety of topics. The pair have now taken their near-boundless "whys" and "hows" from your earbuds to the pages of a book for the first time—featuring a completely new array of subjects that they've long wondered about and wanted to explore. Each chapter is further embellished with snappy visual material to allow for rabbit-hole tangents and digressions—including charts, illustrations, sidebars, and footnotes. Follow along as the two dig into the underlying stories of everything from the origin of Murphy beds, to the history of facial hair, to the psychology of being lost. Have you ever wondered about the world around you, and wished to see the magic in everyday things? Come get curious with Stuff You Should Know. With Josh and Chuck as your guide, there's something interesting about everything (...except maybe jackhammers).

After three international workshops in 1986, 1990, and 1992, User Modeling was transformed into an increasingly prominent bi- nial international conference. Its sustainability was ensured by User Modeling Inc. (http://www. um. org), a professional organization of researchers that has solicited and selectedbids to run the conference,nominated programchairs,and provided ?nancial backing to UM conferences. Between 1986 and 2007, 11 UM conferences were held (including the three workshops just mentioned), bringing together researchers from many areas and stimulating the development of the ?eld. Since the early 1990s, the rapid growth of the World Wide Web and other new platforms has populated the lives of an increasing number of people with a great variety of computing systems. This rampant growth has tended to increase the need for personalization,a topic that more and more researchersand practiti- ers are addressing and that has given rise to several new conferences. Among them,anotherbiennialseriesonAdaptiveHypermediaandAdaptiveWeb-Based Systems (Adaptive Hypermedia or AH for short) quickly established itself as a majorforumandsistereventoUM,running onalternateyearswithit. Between 2000and 2008,?veAH conferenceswere held. During this period, the increasing complexity and prominence of Web systems prompted the enlargement of the list of topics covered by the AH series.
