Current is a measure of: A) force that moves a charge past a point B) resistance to the movement of a charge past a point C) energy used to move a charge past a point D) amount of charge that moves past a point per unit time E) speed with which a charge moves past a point. Resistance and Ohm’s Law. Part 2.

Electric Current

Resistance and Resistivity Resistance is the electric property that impedes a current. A current flowing through a wire (or resistor) is like water flowing through a pipe, and the voltage drop across the wire is like the pressure drop which pushes water through the pipe.

19.3: Resistance and Resistors - Physics LibreTexts

Current tends to move through the conductors with some degree of friction, or opposition to motion. This opposition to motion is more properly called resistance. The amount of current in a circuit depends on the amount of voltage and the amount of resistance in the circuit to oppose current flow.
