Structured Grid Generation, 2003 8.1 Introduction In structured grid generation, as we have seen, grids are constructed in the solution domain (of the partial differential equations to be solved) in such a way that grid points can be regarded as the points of intersection of curvilinear co-ordinate curves (in two dimensions) or surfaces (in three dimensions).

Many mesh generation systems (both structured and unstructured) require

the generation of boundary grids before interior cells can be generated. This is an area in which algebraic grid generation is ideal - typically, we want to specify boundary edge point distributions quickly, with a minimum of complexity, and a high degree of repeatability.
