Water makes a good barrier for testing the conductivity of aqueous solutions. When molecular compounds or other inorganic chemicals are dissolved in the water, they break into ions and increase the water's ability to conduct electricity. If substances are highly ionized, they are considered strong electrolytes.

Electrical Conductivity of Aqueous Solutions

Aqueous solutions are known by the solutions conductivity, in other words, the power to conduct electricity. These solutions are split up into two categories, electrolytes and non-electrolytes. The electrolytes can be classified as strong or weak. These classifications are depended on how much of the ions are in the solution.

Electrolysis is the passage of an electrical current through a molten salt or an aqueous solution of the salt. This experiment tests whether a liquid or a solution is an electrolyte (conduct electricity) or a non-electrolyte. Electrolysis is brought about by the movement of ions. Ions must be present in solution for electrical conductivity.

This is the quantity that the conductivity apparatus measures. Normally, (such as the ones currently used in the laboratory), the units of $1 = -\text{is } -\text{mS cm}^{-1} \cdot 10^1 \text{ S cm}^{-1} \cdot 10^{-1} \text{ S m}^{-1}$. In general the more ions present in a solution the greater the conductivity; however, not all additions to aqueous solutions reliably form ions (e.g. sugar and alcohol). Further, conductivity only increases with concentration up to a maximum value, after which, the conductivity may actually decrease with increasing concentration.

Conductivity of Solutions- Chem 101 Lab - 1 | Ionic ...

Conductivity is a measure of how well a solution conducts electricity. To carry a current a solution must contain charged particles, or ions. Most conductivity measurements are made in aqueous solutions, and the ions responsible for the conductivity come from electrolytes dissolved in the water.

THEORY AND APPLICATION OF CONDUCTIVITY

Aqueous solutions can be classified as polar or nonpolar depending on how well they conduct electricity. Most chemical reactions are carried out in solutions, which are homogeneous mixtures of two or more substances.
