Mole To Mass Stoichiometry

Problems

Mass to Moles Problems. In this type of problem, the mass of one substance is given, usually in grams. From this, you are to determine the amount in moles of another substance that will either react with or be produced from the given substance. (12.3.1) mass of given $\rightarrow$ moles of given $\rightarrow$ moles of unknown.

This could be either a reactant or a product. In either case, moles will have to be converted to grams or the reverse. Suppose you are given a mass in the problem. You will need to convert this to moles FIRST. You do this by dividing the mass given by the molar mass of the substances. This technique is covered in the mole section of the ChemTeam.

Well if the atomic weight of chlorine gas is 70.906, that means one mole of it is going to have a mass of 70.906 grams. So for every mole, we have 70.90 grams. We have 0.07 moles. So we will multiply 0.07 times 70 to figure out how many grams we have. And the units cancel out. We have moles of chlorine gas and we're just going to have grams required.
