Solutions

To graph a linear inequality: Step 1

Replace the inequality symbol with an equal sign and graph the

resulting line. Step 2

Check one point that is obviously in a

particular half-plane of that line to see if it is in

the solution set of the inequality. Step 3 If the

point chosen is in the solution set, then that

The steps to solve linear inequalities are the same as linear equations, except if you multiply or divide by a negative when solving for the variable, you must reverse the inequality symbol.

Example: Solve.

Express the solution as an inequality, graph and interval notation. $x + 4 > 7$. $-2x > 8$. $x/2 > -1$. $x - 9 \geq -12$.

Solving Inequalities (video lessons, examples, solutions)

To solve an inequality using the number line, change the inequality sign to an equal sign, and solve the equation. Then graph the point on the number line (graph it as an open circle if the original inequality was " $<$ " or

" $>$ "). The number line should now be divided into 2 regions -- one to the left of the point and one to the right of the point

Inequalities: Graphing Inequalities on a Number Line ...

Now divide each part by 2 (a positive number, so again the inequalities don't change): $-6 < -x < 3$. Now multiply each part by -1 . Because we are multiplying by a negative number, the inequalities change direction. $6 > x > -3$. And that is the solution! But to be neat it is better to have the smaller number on the left, larger on the right.

Solving Inequalities - MATH

Solving compound inequalities A

compound inequality contains at least two inequalities that are separated by either "and" or "or". The graph of a compound inequality with an "and" represents the intersection of the graph of the inequalities. A number is a solution to the compound inequality if the number is a solution to both inequalities.

The solution of a quadratic inequality are all of the points within the area $y > x^2 - 1$ where $y = 0$. In other words, the solution of a quadratic equation holds the same meaning that you are accustomed to. The solution is just where the graph crosses the X-axis. The new twist is that instead of just two or fewer points.

There are three ways to solve systems of

linear equations: substitution, elimination, and graphing. Substitution will have you substitute one equation into the other; elimination will have you add or subtract the equations to eliminate a variable; graphing will have you sketch both curves to visually find the points of intersection.
