Bandwidth Selection For Kernel Conditional

Abstract. We consider bandwidth selection for the kernel estimator of conditional density with one explanatory variable. Several bandwidth selection methods are derived ranging from fast rules-of-thumb which assume the underlying densities are known to relatively slow procedures which use the bootstrap.

Bandwidth Selection for Kernel Conditional Density ...

This paper discusses the kernel estimator of conditional density. A significant problem of kernel smoothing is bandwidth selection. The problem consists in the fact that optimal bandwidth depends on the unknown conditional and marginal density. This is the reason why some data-driven method needs to be applied.

The data types may be continuous, discrete (unordered and ordered factors), or some combination thereof. `bws`. a bandwidth specification. This can be set as a `conbandwidth` object returned from a previous invocation, or as a $p+q$ -vector of bandwidths, with each element i up to $i=p$ corresponding to the bandwidth for column i in `xdat`, and each element i from $i=p+1$ to $i=p+q$ corresponding to the bandwidth for ...

Kernel density estimation - Wikipedia

4.3 Bandwidth selection. Bandwidth selection, as for kernel density estimation, is of key practical importance for kernel regression estimation. Several bandwidth selectors have been proposed for kernel regression by following similar plug-in and cross-validatory ideas to the ones seen in Section 4.3. For simplicity, we first briefly overview the plug-in analogues for local linear regression for a single continuous predictor.

4.3 Bandwidth selection | Notes for Nonparametric Statistics

In the context of estimating local modes of a conditional density based on kernel density estimators, we show that existing bandwidth selection methods developed for kernel density estimation are unsuitable for mode estimation. We propose two methods to select bandwidths tailored for mode estimation in the regression setting.
