Introduction to the Controller Area Network (CAN) (Rev. B)

Controller Area Network (CAN) was initially created by German automotive system supplier Robert Bosch in the mid-1980s for automotive applications as a method for enabling robust serial communication. The goal was to make automobiles more reliable, safe and fuel-efficient while decreasing wiring

harness weight and complexity.

Controller Area Network (CAN) Basics

Controller Area Network (CAN) is a serial network technology that was originally designed for the automotive industry, especially for European cars, but has also become a popular bus in industrial automation as well as other applications.

A Brief Introduction to Controller Area Network

Controller Area Network (CAN) bus is a serial communication bus, originally developed for automotive purposes. It was developed by Robert Bosch GmbH in 1983. As the name suggests, this two-wire,

half duplex bus is used for the communication between different microcontroller units and other peripherals without the presence of host system.

Introduction to the Controller Area Network (CAN)

A Controller Area Network (CAN bus) is a robust vehicle bus standard designed to allow microcontrollers and devices to communicate with each other's applications without a host computer. It is a message-based protocol, designed originally for multiplex electrical wiring within automobiles to save on copper, but can also be used in many other contexts. For each device the data in a frame is transmitted sequentially but in such a way that if more than one device transmits at the same time the ...
