Circular Motion | Definition, Equations, Formulas, Units - Motion in a Plane. Circular motion is the movement of an object in a circular path. We are giving a detailed and clear sheet on all Physics Notes that are very useful to understand the Basic Physics Concepts.

Circular Motion | Definition, Equations, Formulas, Units ...

According to Newton's first law of motion, the body cannot change its direction of motion, an external force is required to maintain its circular motion. However, this body continuously changes its direction of motion by itself, and there is a change in the velocity as well, that's why it undergoes acceleration, called the radial centripetal acceleration.

Motion in a Plane (Projectile and Circular Motion): In this chapter or under this topic, we are going to come across the motion of the object when it is thrown from one end to another end. This practice is said to be projection. Also, when an object is moved in a circular motion, then the equation of the motion is derived here.

Motion in a Plane | Definition, Formulas, Types - Motion ...

Uniform circular motion is the motion in which an object moves on a circular path with constant speed. For example: watch, moon revolve around earth etc. Non uniform circular motion is the motion in which an object is moves on circular path with varying speed. When an object is in circular motion, direction of its velocity keeps on changing.
