The ability of AM hyphae to grow beyond

this depletion zone and deliver P to the root is thought to be the main basis for their positive effects on P uptake and plant growth (Smith and Read, 1997). Where there is no response to symbiosis in terms of these variables (i.e. values for AM plants are not larger than NM plants growing in the same soil), it has been assumed that the mycorrhizal uptake pathway is not functioning and that all of the plant P is absorbed directly through P transporters ...
