Optics Of Light Scattering Media Problems And Solutions ...

Scattering is a term used in physics to describe a wide range of physical processes where moving particles or radiation of some form, such as light or sound, is forced to deviate from a straight trajectory by localized non-uniformities in the medium through which they pass. In conventional use, this also includes deviation of reflected radiation from the angle predicted by the law of reflection. Reflections of radiation that undergo scattering are often called diffuse reflections and unscattered

OSA | Focusing coherent light through opaque strongly scattering media We report focusing of coherent light through opaque scattering materials by control of the incident wavefront. The multiply scattered light forms a focus with a brightness that is up to a factor of 1000 higher than the brightness of the normal diffuse transmission.

Focusing coherent light through opaque strongly scattering ...

In this way Rayleigh scattering appears very much like absorption but it absorbs and redirects the light so quickly that is considered scattering. The Rayleigh scattering formula is given by: $\gamma_R = \frac{8\pi^3}{3\lambda^4} n^8 p^2 \beta_c kT_F$ Where γ_R is Rayleigh scattering coefficient.
