Continuous And Discrete Signals Systems

Continuous signals are represented within parenthesis. (figure describe continuous system) Discrete systems. In discrete systems, both input and output signals are discrete signals. The variables in the discrete systems vary with time. In this type of system, the changes are predominantly discontinuous. The state of variables in discrete system changes only at a discrete set of points in time.

Continuous Systems vs Discrete Systems - Javatpoint

There are two types of signals – discrete-time and continuous-time signals. Discrete-time signals are defined at the discrete moment of time and the mathematical function takes the discrete set of values. Continuous-time signals are characterised by independent variables that are continuous and define a continuous set of values.
