Metal forming processes

Cold working or cold forming is any metalworking process in which metal is shaped below its recrystallization temperature, usually at the ambient temperature. Such processes are contrasted with hot working techniques like hot rolling, forging, welding, etc.:p.375 Cold forming techniques are usually classified into four major groups: squeezing, bending, drawing, and shearing. They generally have the advantage of being simpler to carry out than hot working techniques. Unlike hot working, cold work

Drawing (manufacturing) - Wikipedia

Metal-forming processes have been

around for thousands of years. Today's varieties in the metal-forming industries include complex processes such as sheet metal-stamping, wire-drawing, hydroforming, rolling and hot- or cold-forming. These processes often have high pressures between acting surfaces and in many applications high temperatures as well.

Choosing a Metal-Forming Lubricant

Wire drawing is the second major category of metal drawing operations. While rod and bar drawing refer to the drawing of larger cross sections, wire drawing refers to the drawing of relatively smaller cross sections. The enormous amount of electrical wire and cable

Three of the most common types of work hardening are cold rolling, bending, and drawing. Cold rolling is the most common method of work hardening. This involves the metal being passed through pairs of rollers to reduce its thickness or to make the thickness uniform. As it moves through the rollers and is compressed, the metal grains are deformed.
