Hyperspectral Remote Sensing Of Coral Reefs

Remote sensing has long been acknowledged as an important tool in the study and management of coral reef ecosystems. Globally, reefs face unprecedented challenges to survival and adaptation. This includes both natural and anthropogenic stresses at local or regional scales, and the worldwide environmental pressures associated with climate change and ocean acidification.

Special Issue "Advances in Remote Sensing of Coral Reefs"

Among the range of threats posed to coral reefs, warming ocean due to climate change is among the most concerning. A new study led by Lisa Wedding, Associate Professor at the University of Oxford's School of Geography and the Environment, uses remotely sensing to illuminate coral reef complexity and biodiversity.
